

VSCode and GCC installation Guideline

Step 1: Download the TDM-GCC Compiler

Instruction

Open your web browser and visit the official **TDM-GCC** website:

[TDM-GCC Official Website](https://jmeubank.github.io/tdm-gcc/)

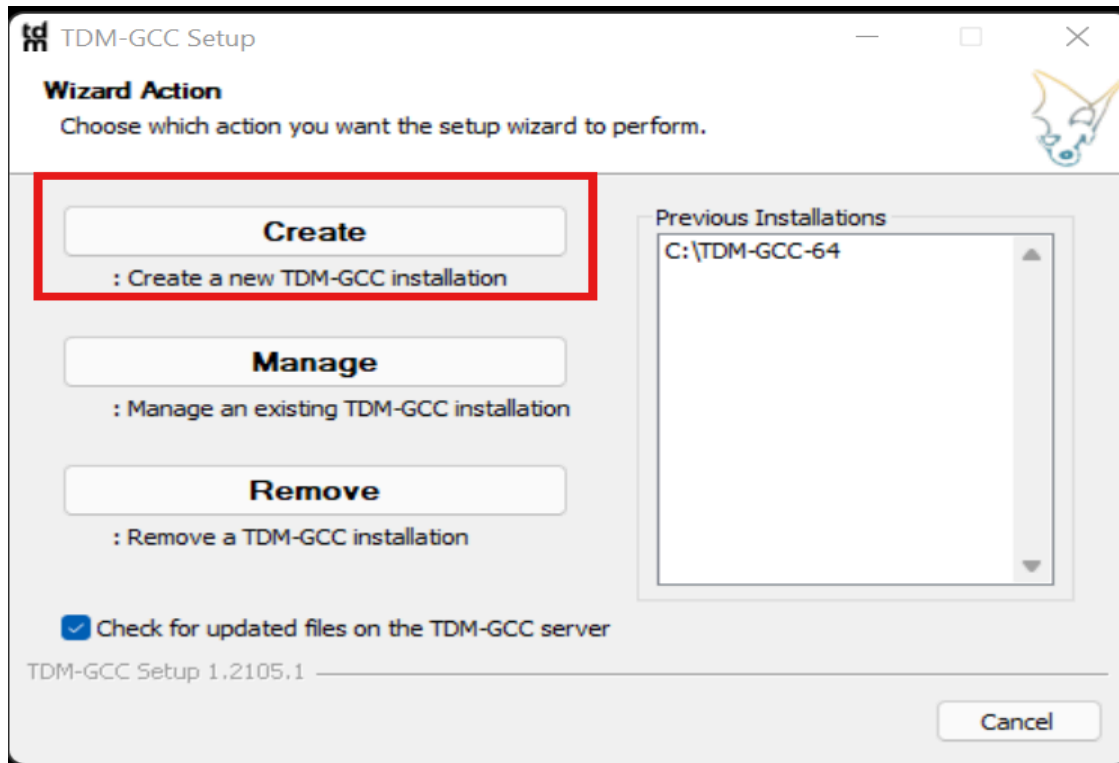

Navigate to the **Downloads** section and download the [tdm-gcc-10.3.0.exe](#), installer that matches your system architecture (32-bit or 64-bit). Once the download is complete, proceed to the next step to install the compiler

1. Installation steps for compiler (gcc)

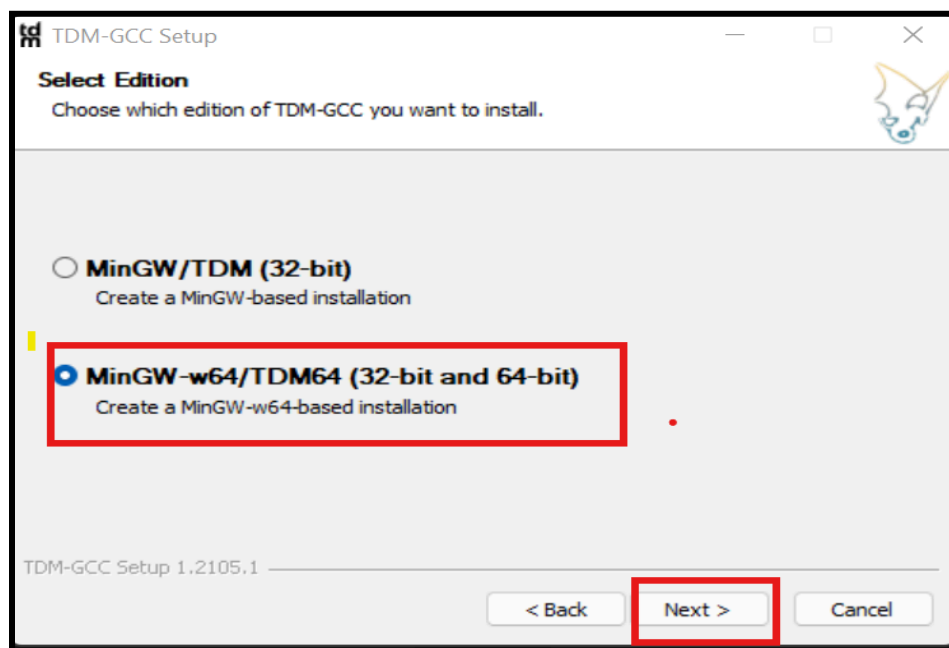

Double click on downloaded executable file.

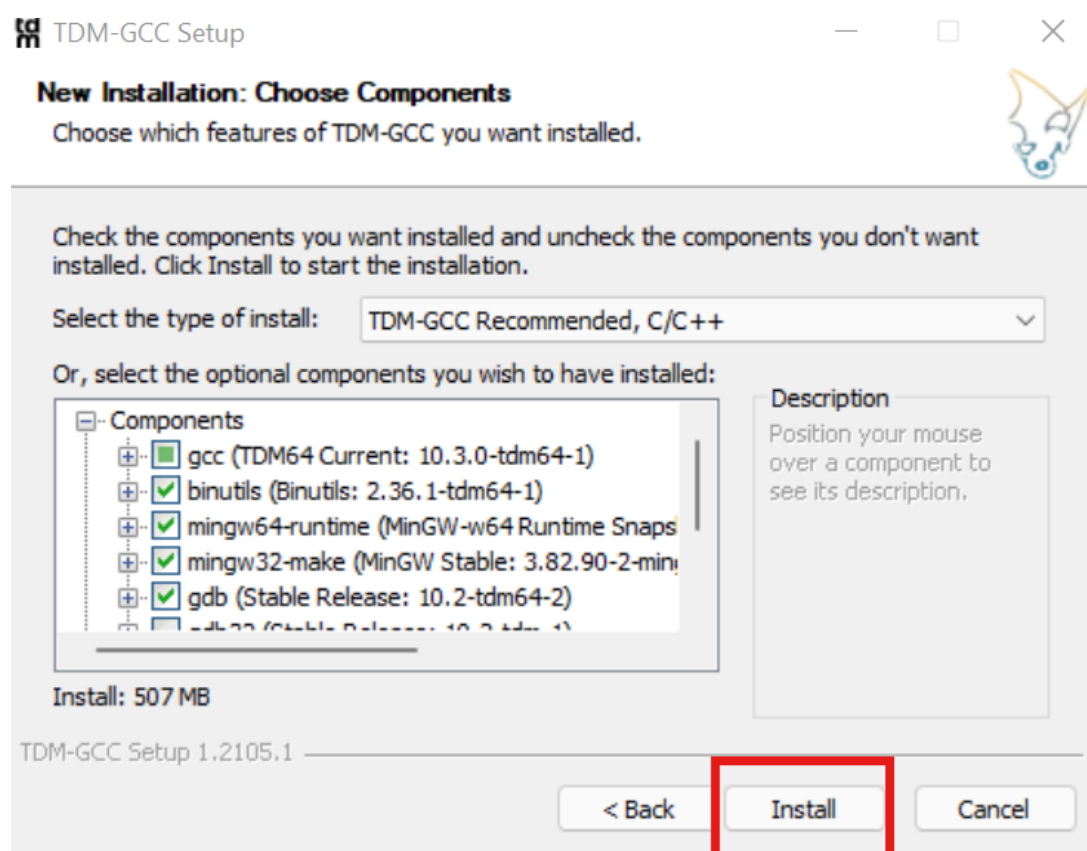

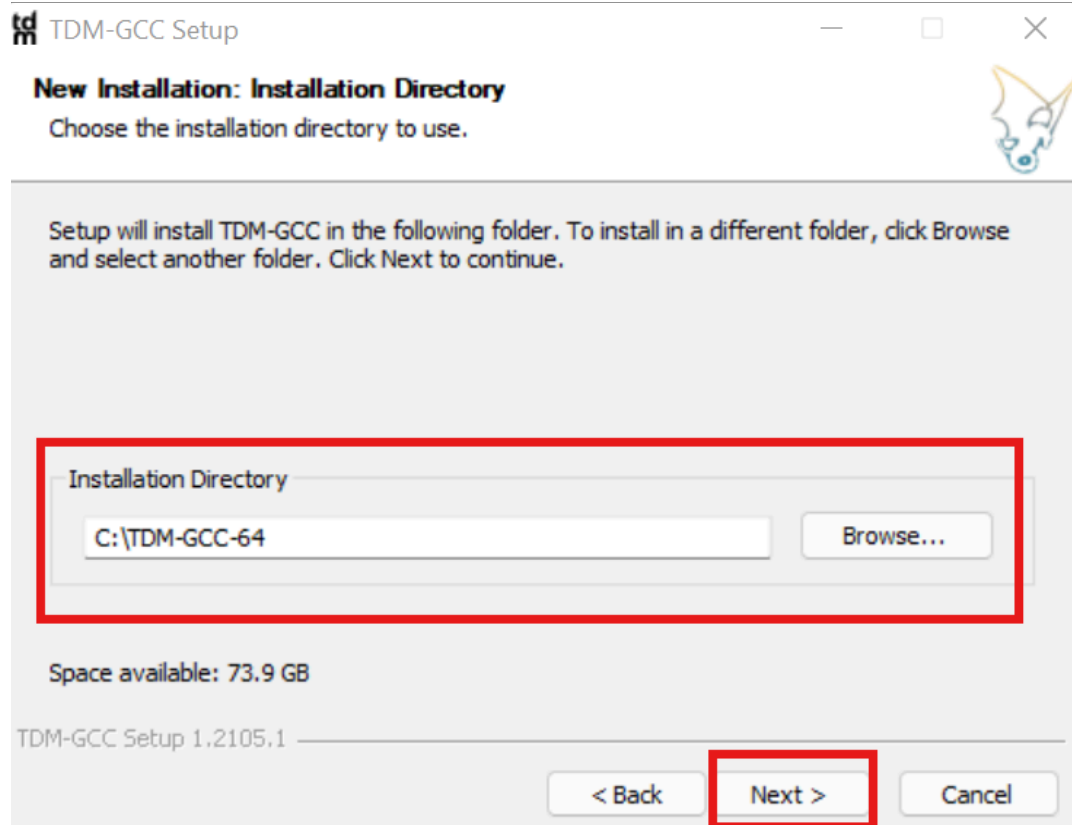

Click on Yes to install it.

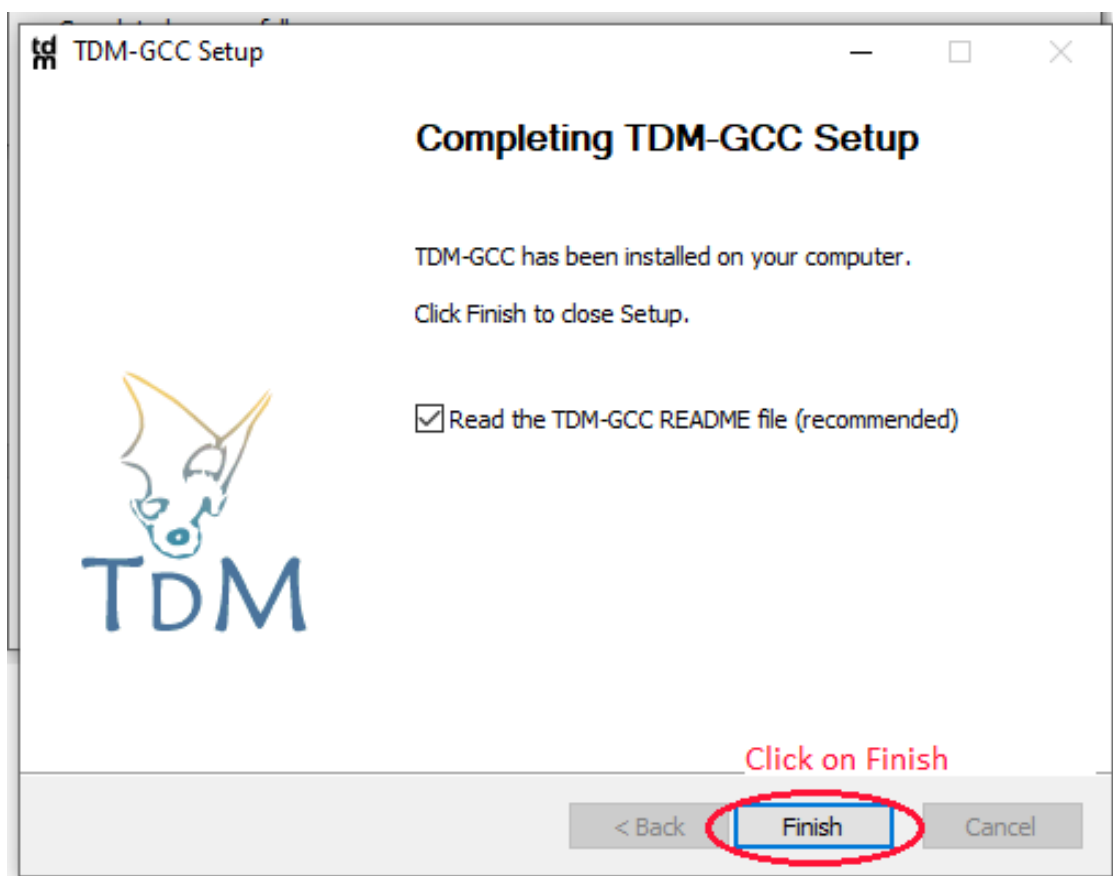

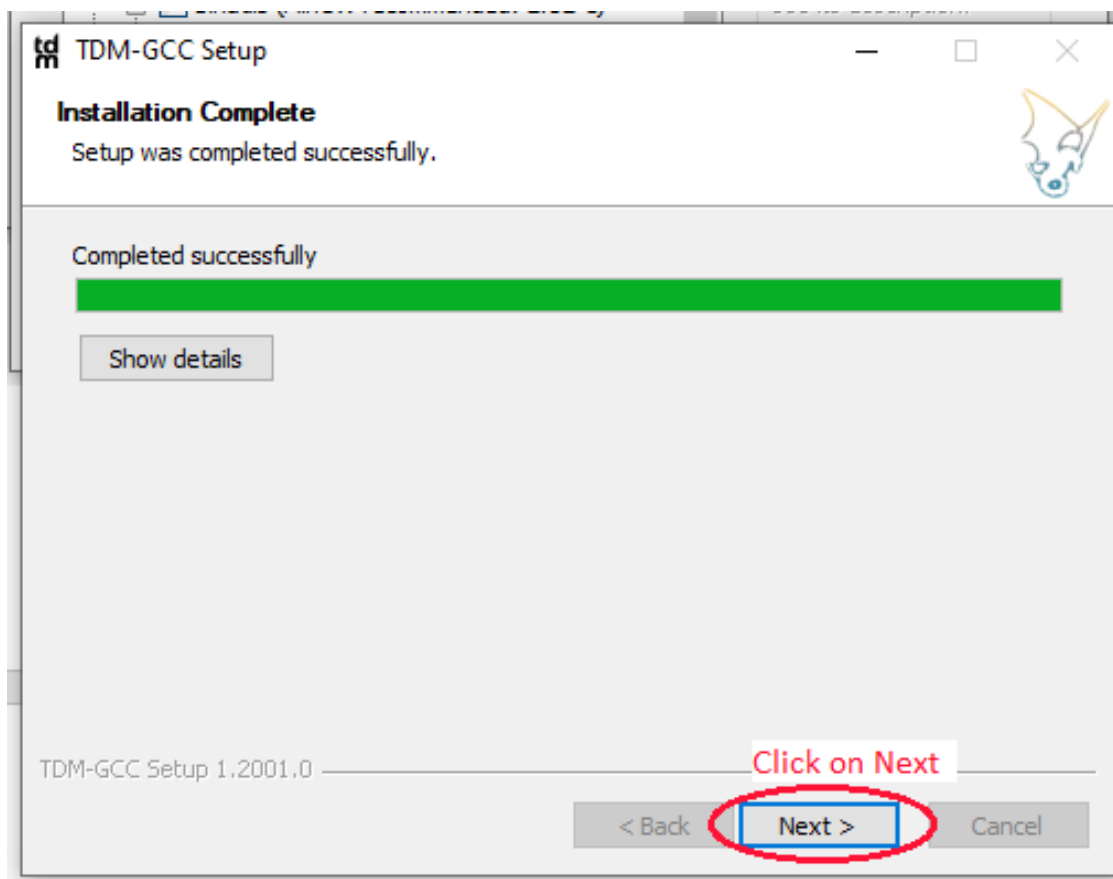

Click on Create and uncheck option for online updates

Select minGW-w64/TDM64 (32 bit and 64-bit) and click on Next

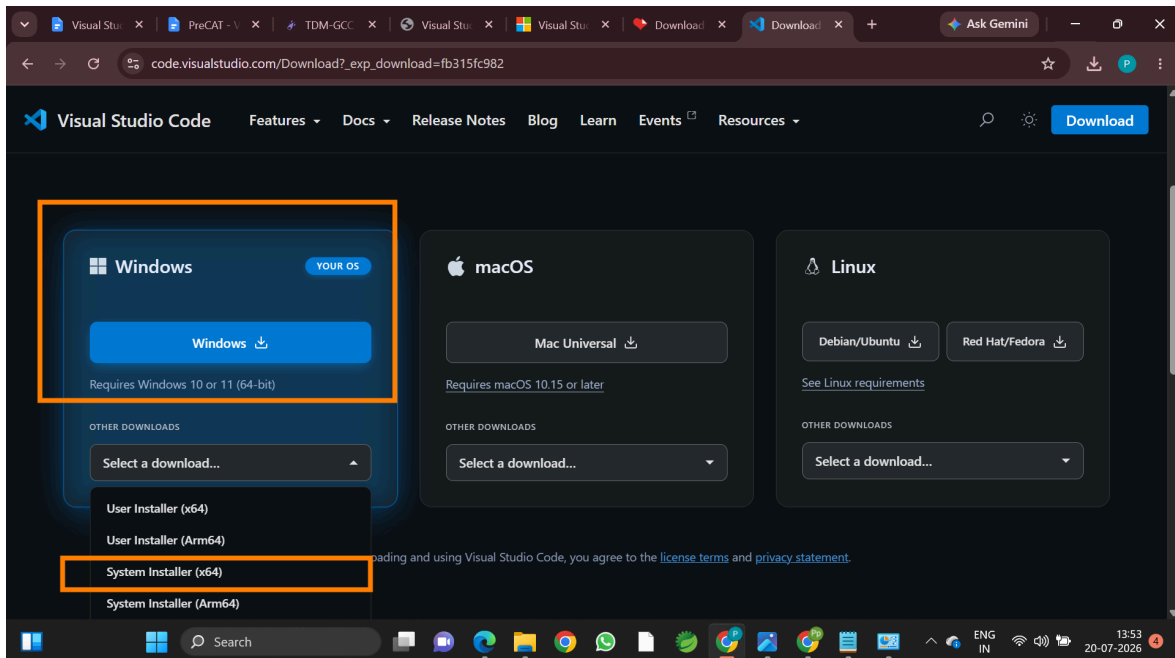

1.Download the Visual Studio Code

Visit - <https://code.visualstudio.com/Download>

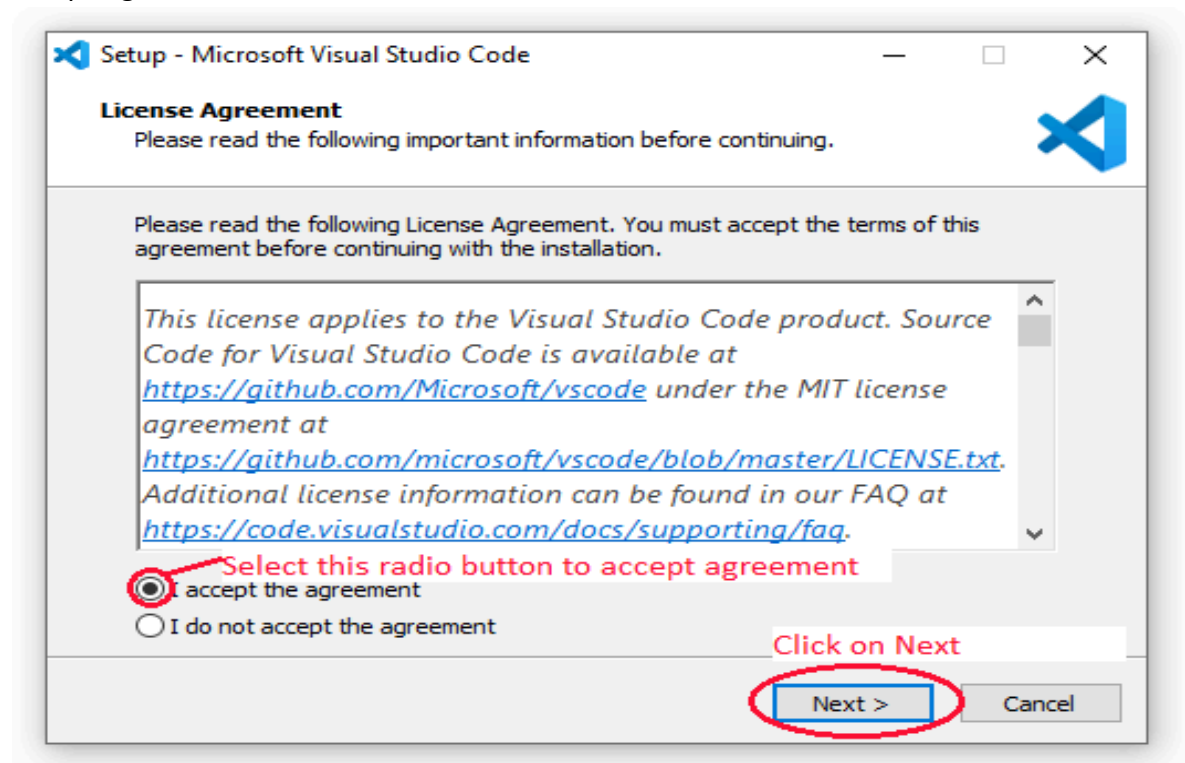

1. Installation steps for Visual Studio Code

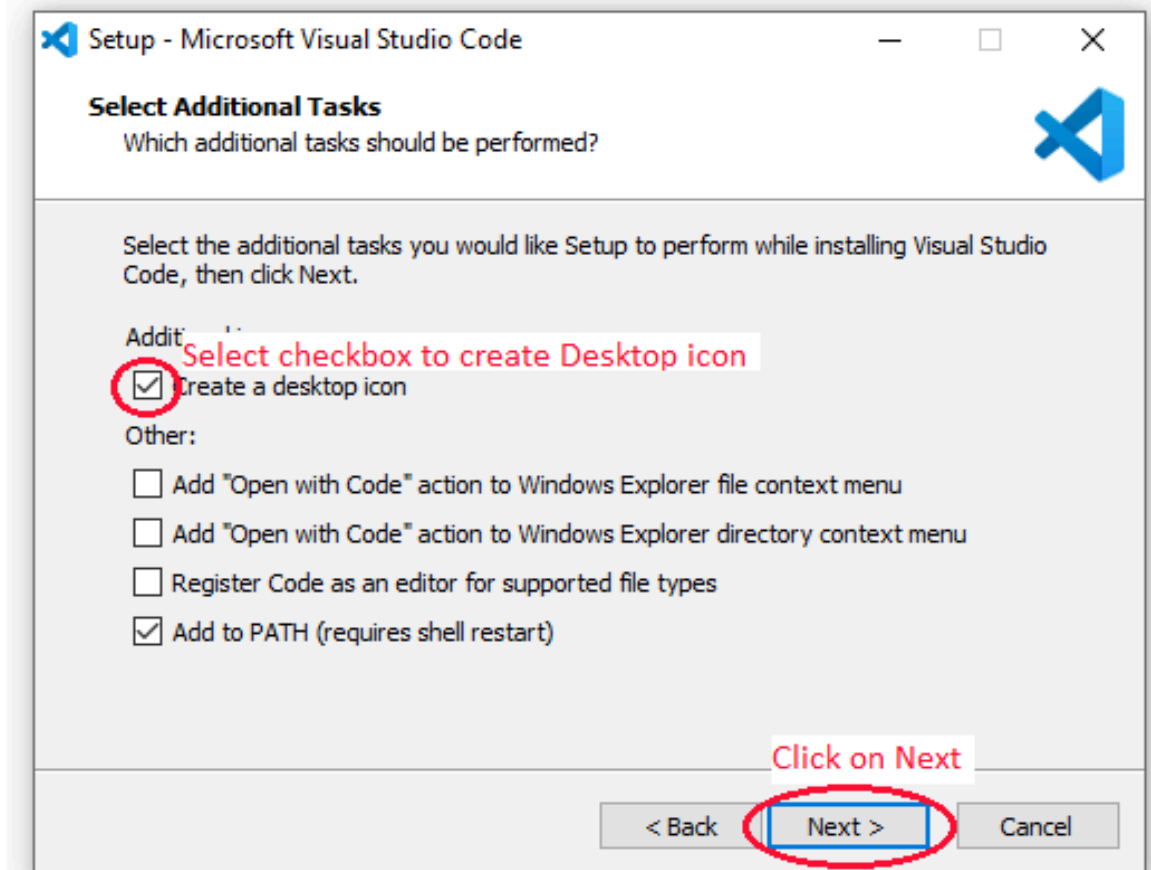

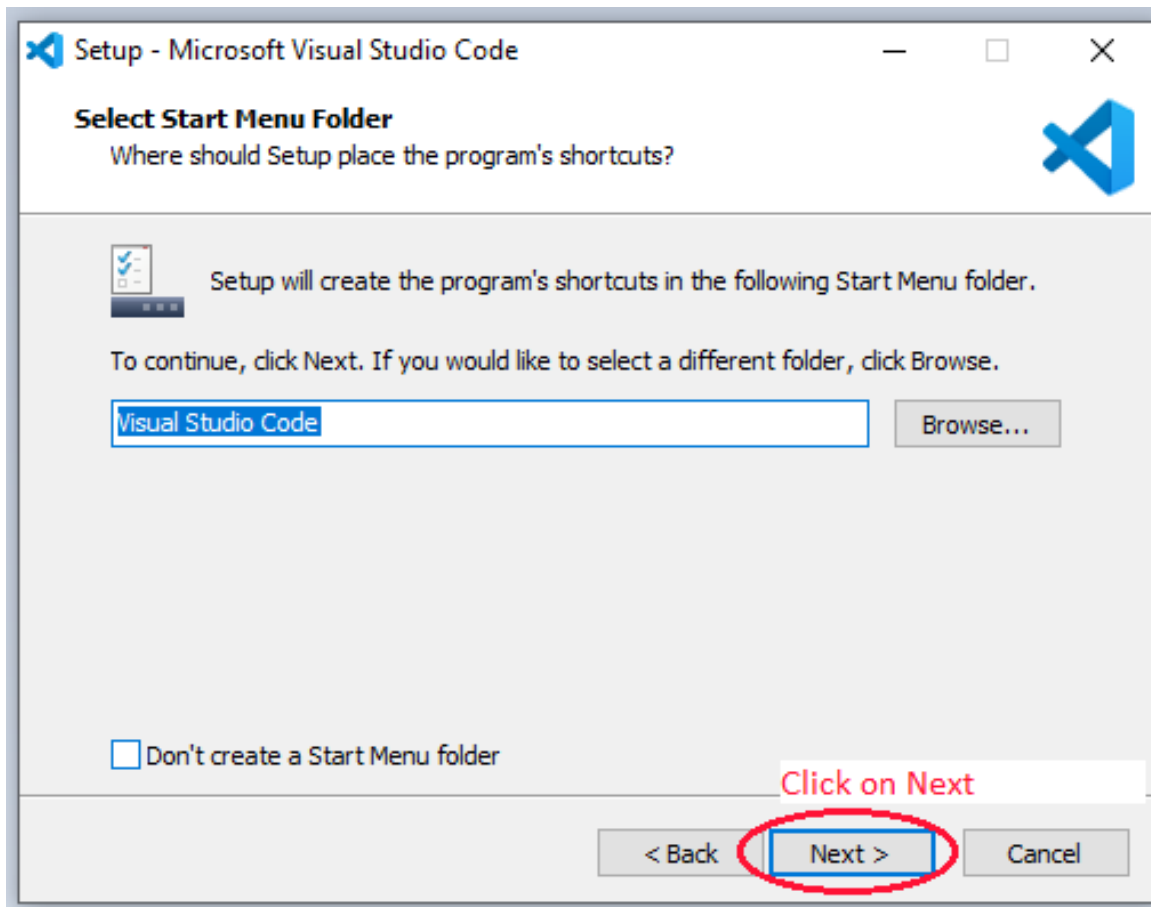

You will get an executable file of Visual Studio Code, now it's time to install it.

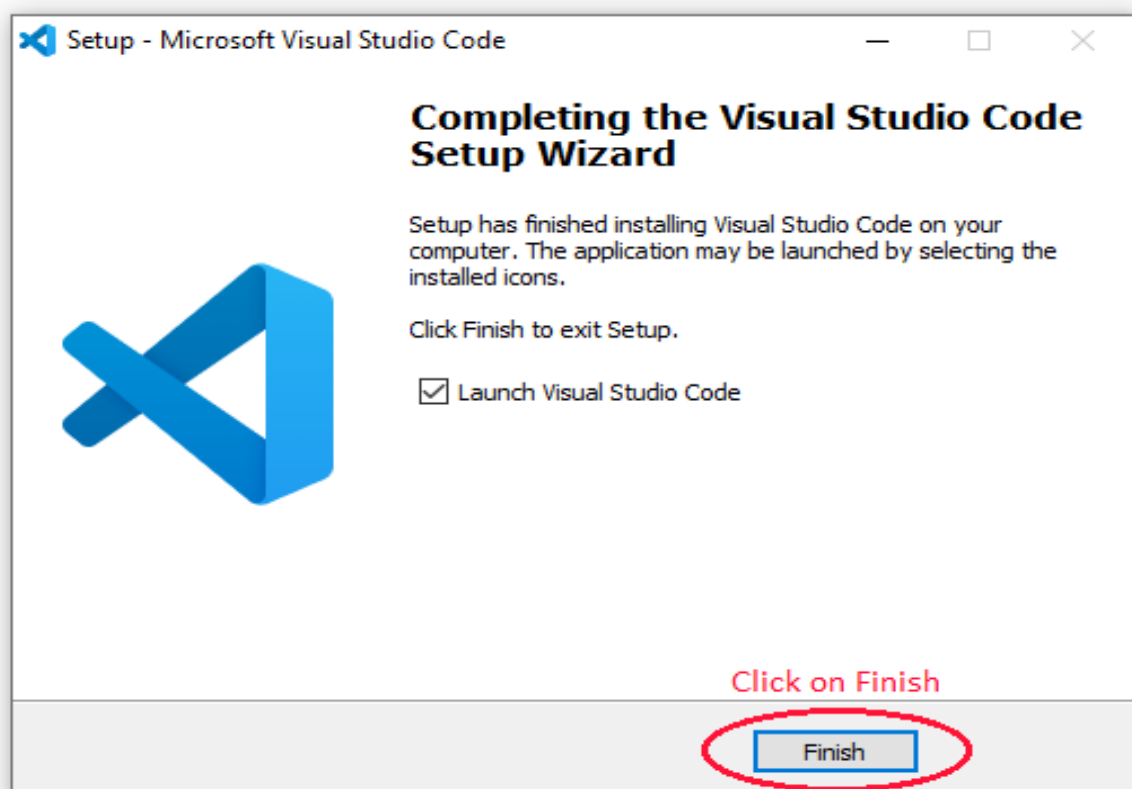

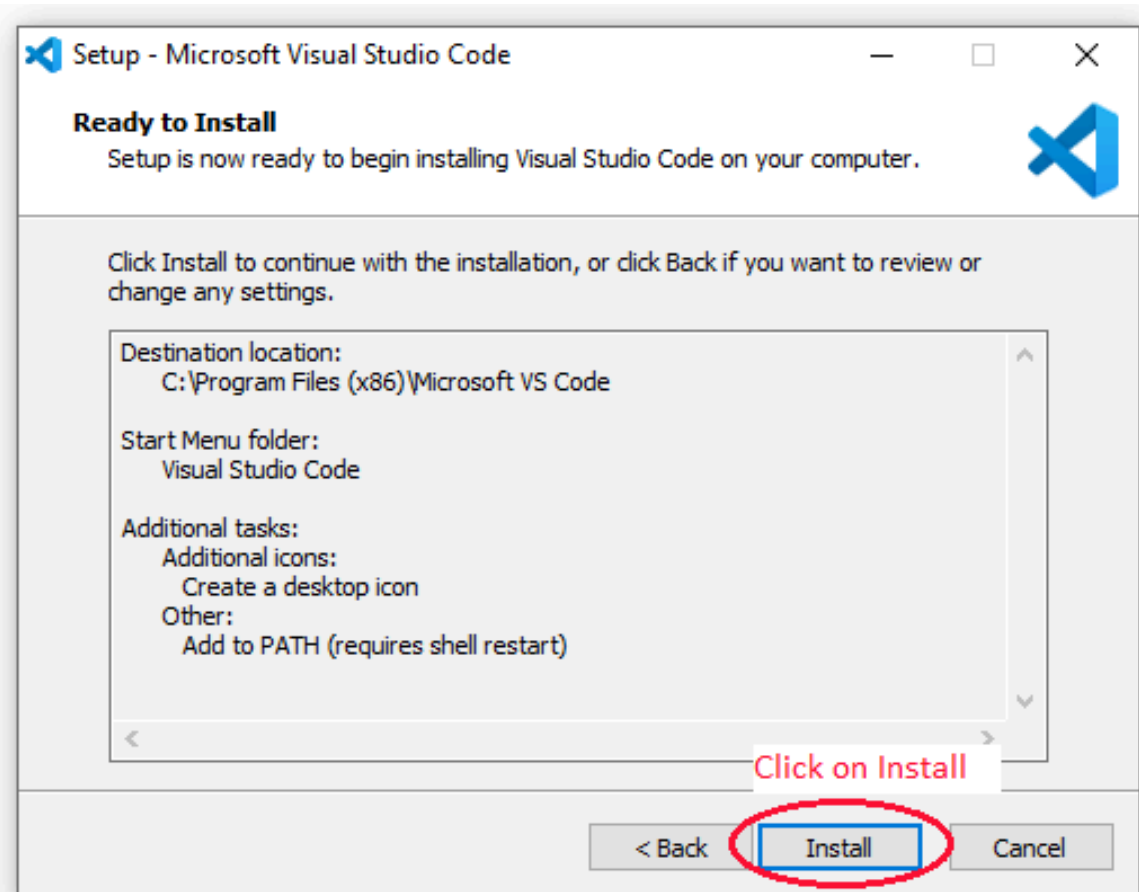

Double click on downloaded file

Click on Yes to install it

Accept Agreement and click on Next button.

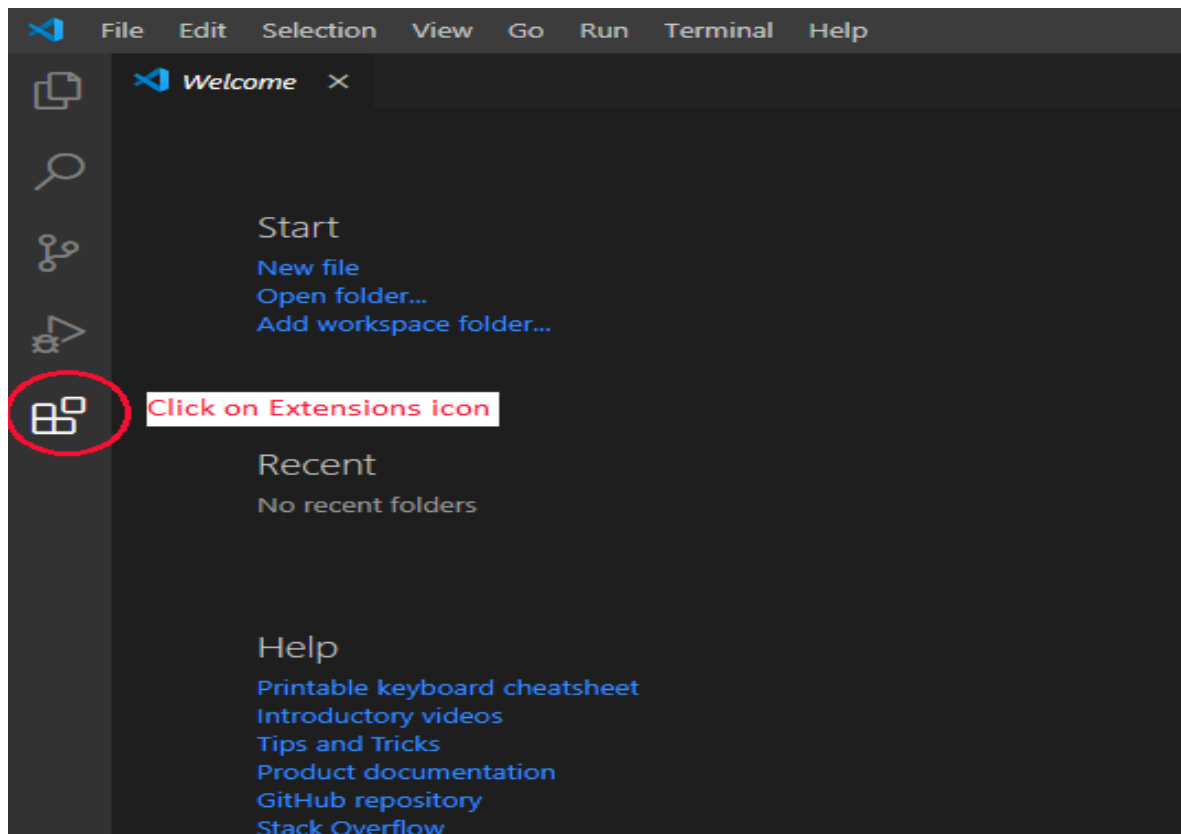

On your Desktop Visual Studio Code shortcut is created. Every time double click on this icon to open Visual Studio Code.

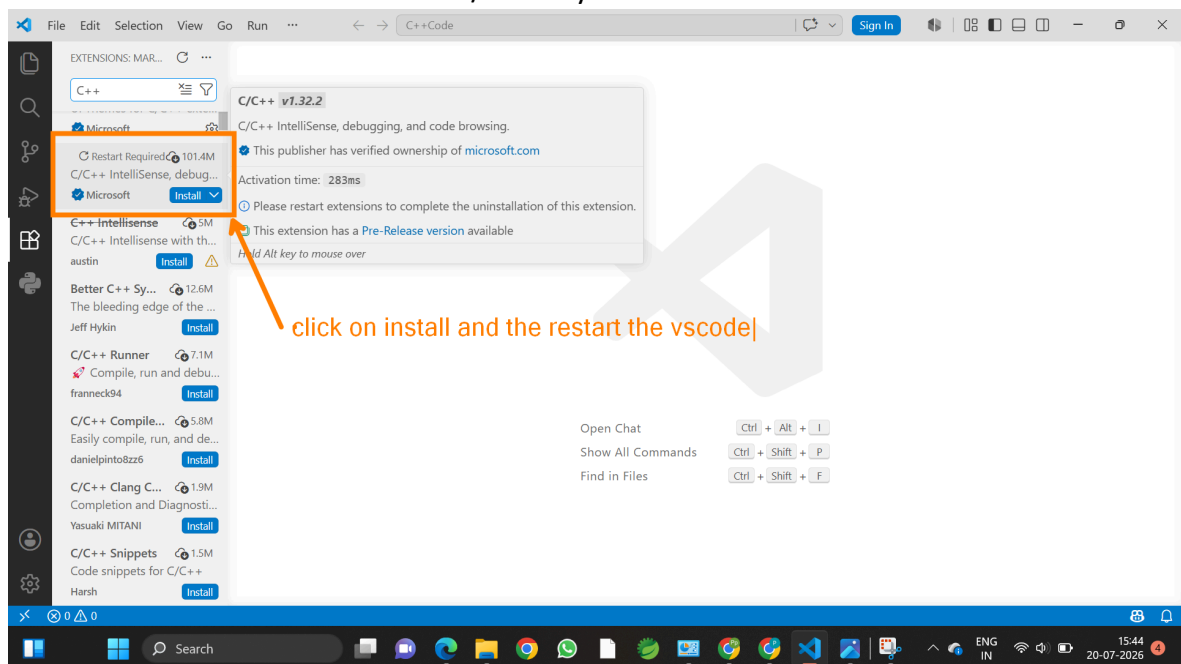

1. Configuration Steps for Visual Studio Code

Open Visual Studio Code. You will get a welcome window

Click on Extensions to add C/C++ extensions to VS Code

Click on Install to add extension of C/C++ to your editor.

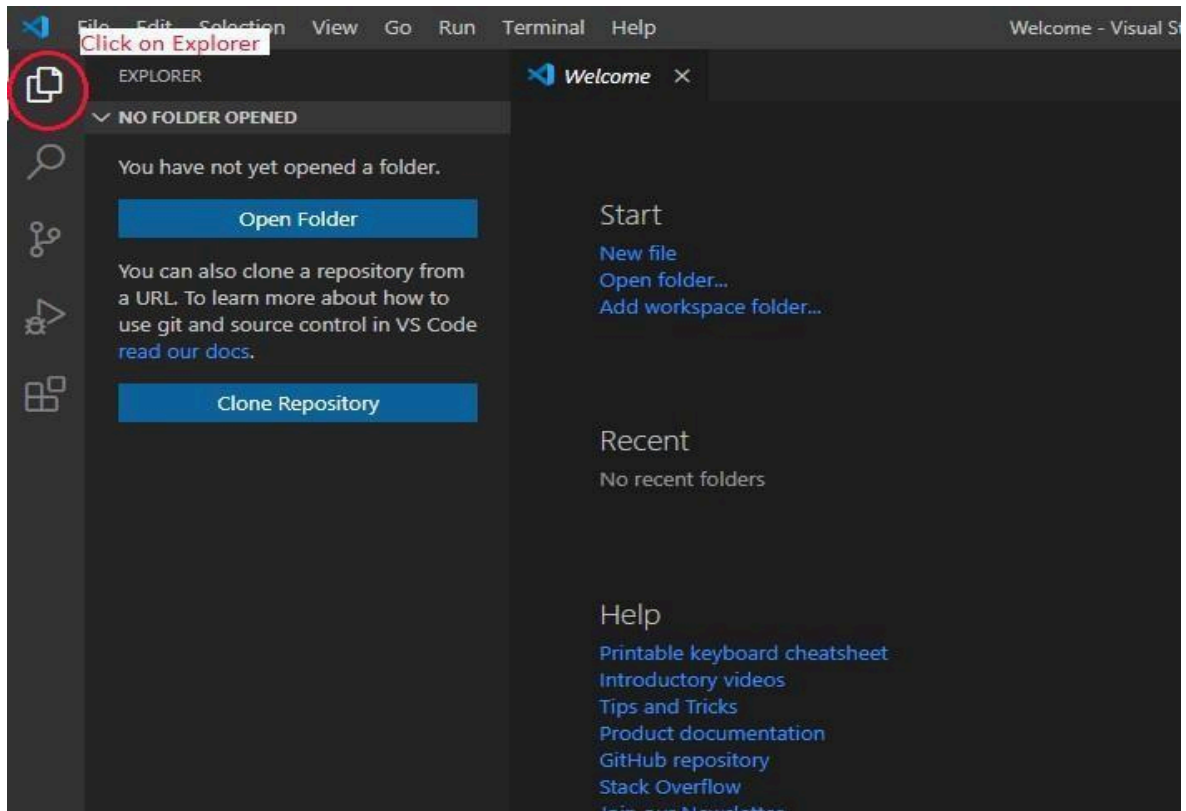

Now close your VS Code and your VS code is ready to do C++ programming

1. Write first “Hello World” Program in Visual Studio Code

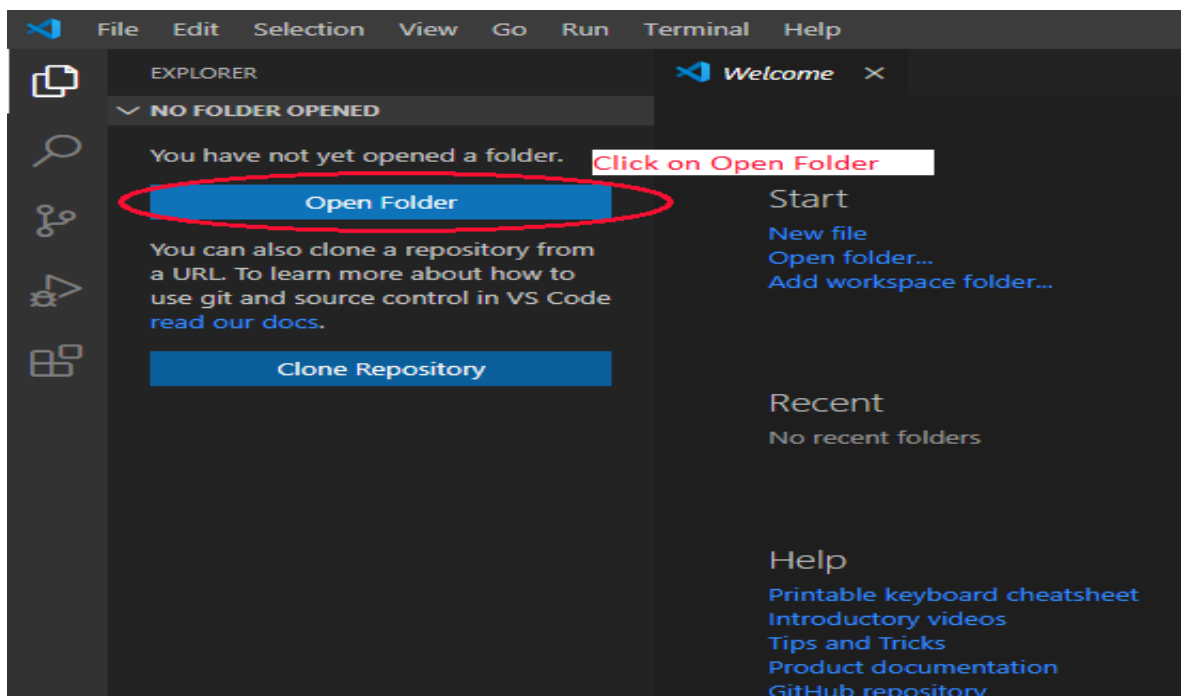

Open Visual Studio Code

Click On Explorer

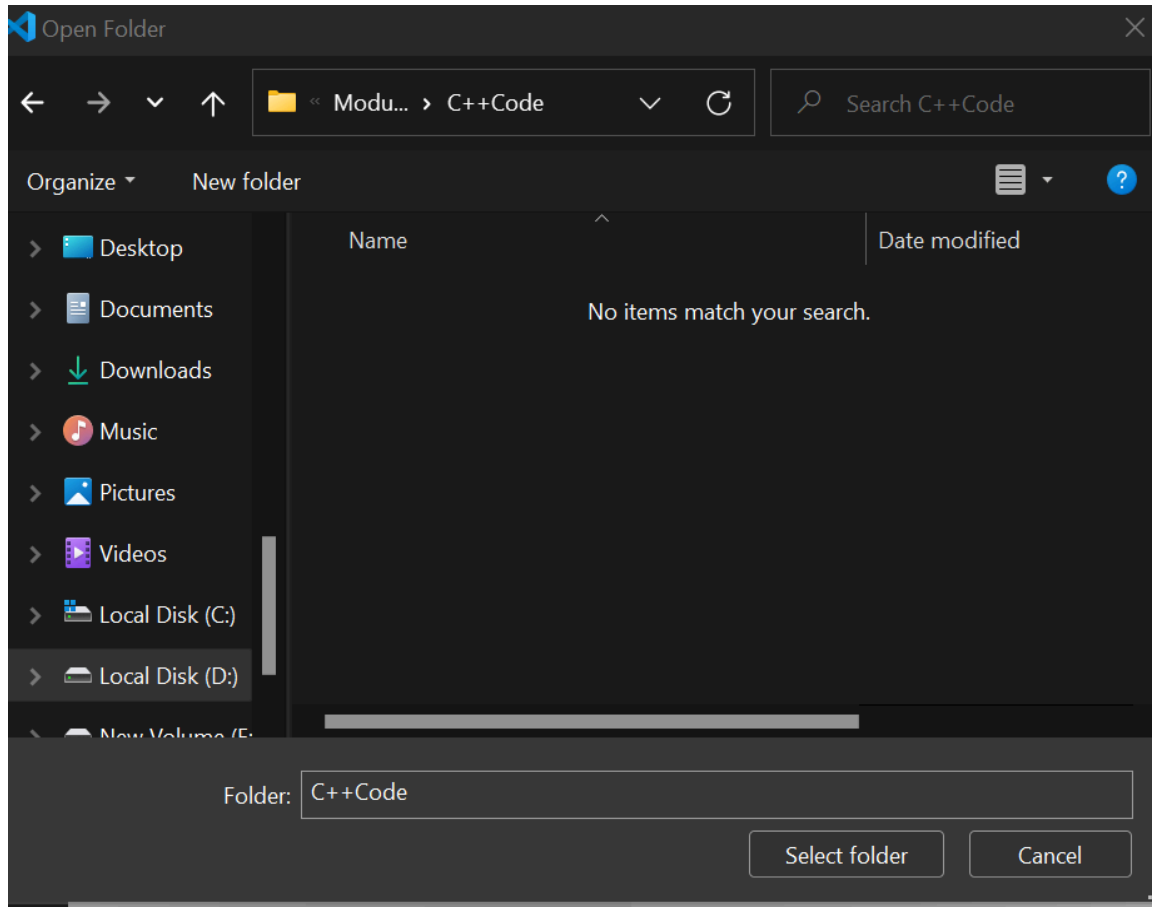

Create one folder in your D:/ drive to store your C++ programs with name “CPPPrograms”.

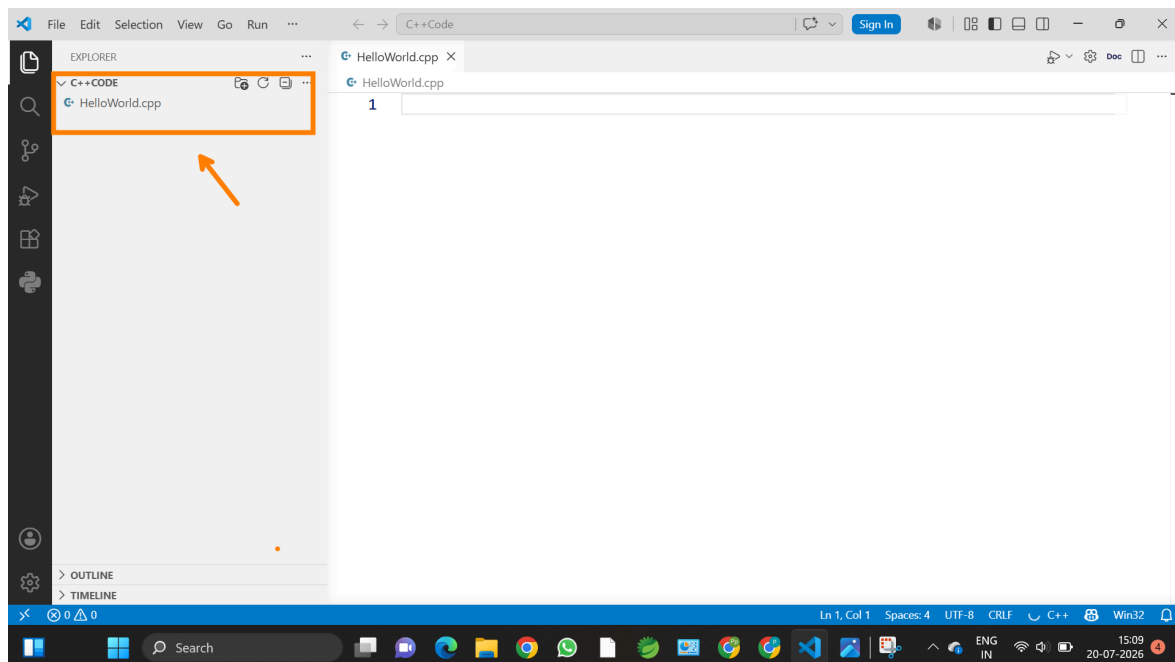

Click on Open Folder

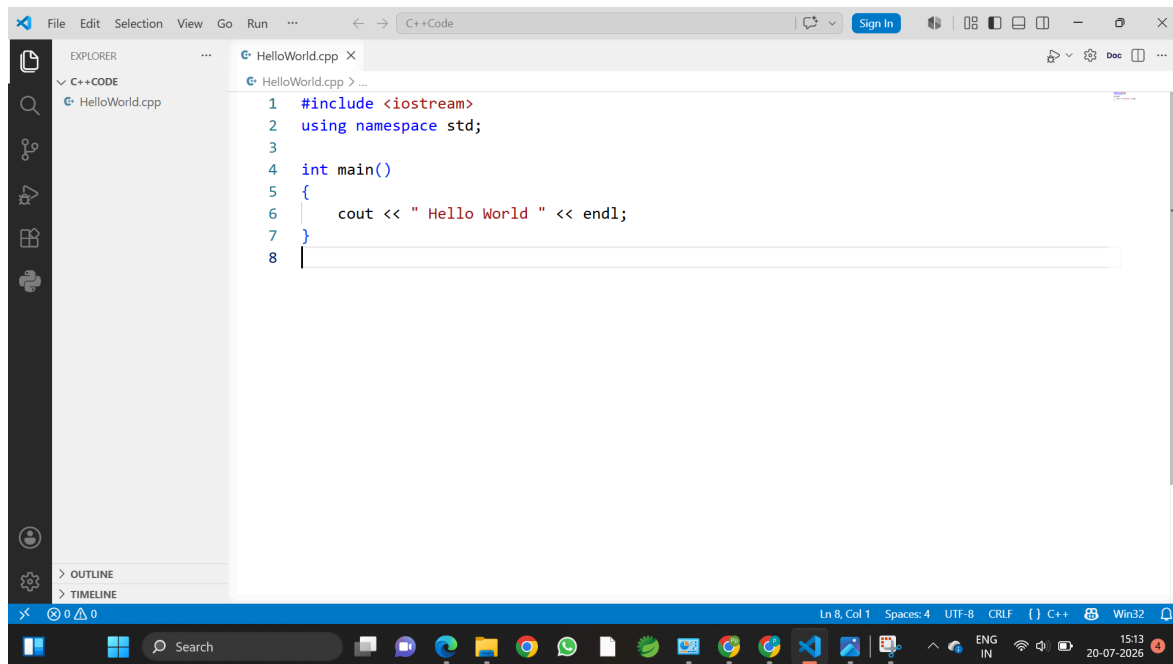

Select The folder

Create new .cpp file and give name "HelloWorld.cpp"

“HelloWorld.cpp” file will be opened into editor. Write below mentioned code into file and save it.

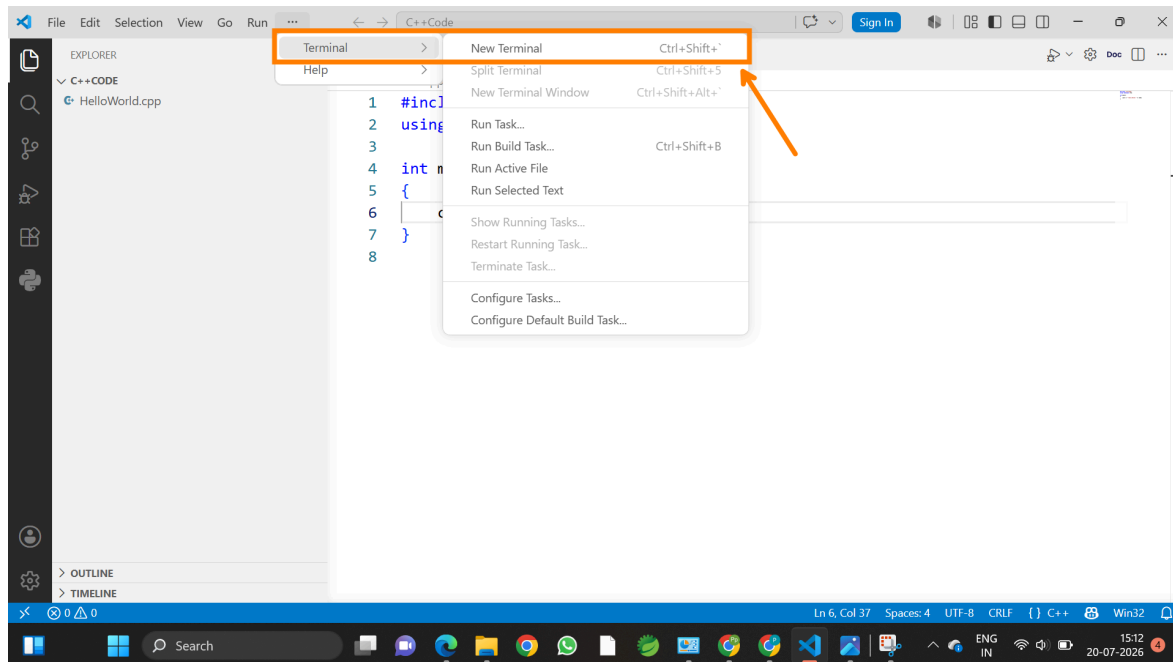

The screenshot shows the Visual Studio Code editor interface. The Explorer sidebar on the left shows a project named 'C++CODE' with a file 'HelloWorld.cpp'. The main editor window displays the following C++ code:

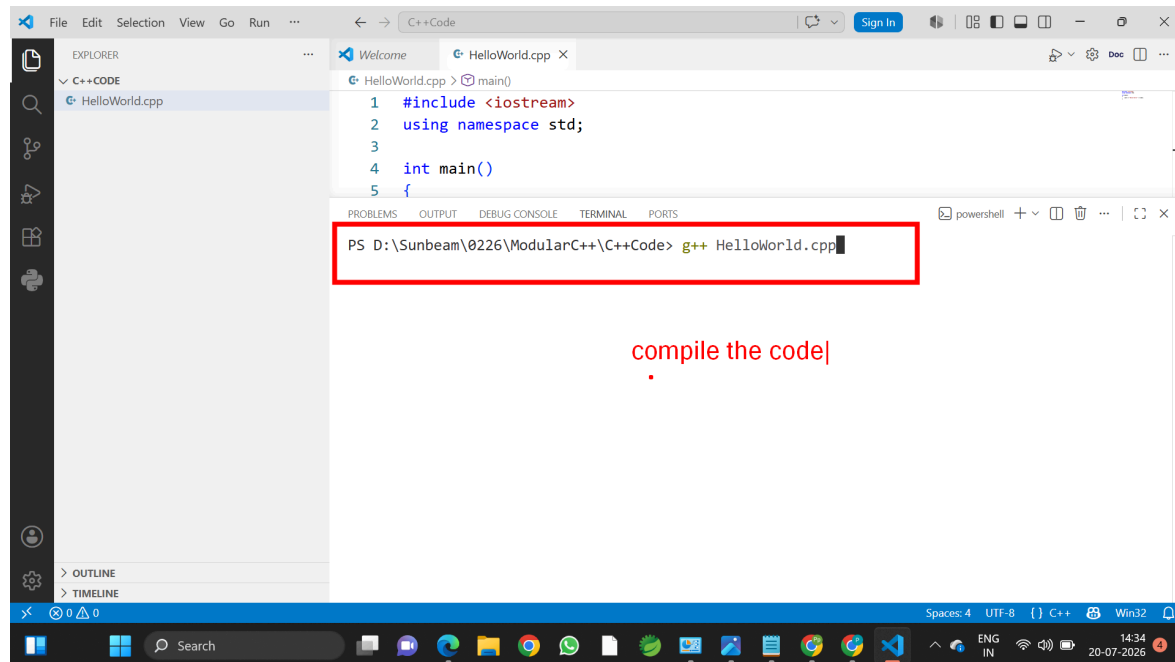

```
1 #include <iostream>
2 using namespace std;
3
4 int main()
5 {
6     cout << " Hello World " << endl;
7 }
8
```

The status bar at the bottom indicates 'Ln 8, Col 1', 'Spaces: 4', 'UTF-8', 'CRLF', 'C++', and 'Win32'.

Click on Terminal option and click on New Terminal

Give command “g++ HelloWorld.cpp” to compile your C++ program

Give command “.\\a.exe” in same terminal to run your program
a.exe will be created in your folder.
